BioWare created a vibrant universe in their Mass Effect series, teeming with unique planets and alien life. Experts in planetary geology and astrobiology will discuss what the games got right and where they missed the mark.

Teachers will learn about astrobiology/geology from the perspective of the video game series Mass Effect. As well as see how well it accurate it's science proves to be.

Ryan Stikeleather, Graduate Student, Molecular Biology, Genetics, R Programming, Arizona State University

Joseph Hunter, Graduate Student, Vaccinology, Genetic Modification, Immunology, Arizona State University

Sierra Ferguson, Graduate Student, School of Earth and Space Exploration, Arizona State University
