

Ape-x Predator: The Science of King Kong

5/25/2017 9:00:00 PM

1 Hour          Science          North 131C

Bigger is always better! But can the environment support a true giant ape? Who are King Kong's parents since we only ever see one? In this era of satellite imagining are there really any more uncharted islands? Hollywood should have asked our panelists a few of these questions while writing the script!

Teachers will discover resources for teaching evolution, current topics in ecology and discussion points for student engagement in a geography.
