

## Bones: The Real Science of Forensic Anthropology

5/26/2017 7:30:00 PM

1 Hour

Science

North 132A

Judging by worn down teeth and the curvature of the spine this skeleton must have been a scientist working in a lab, as only those who work in excess of 80 hours hunched over a bench grinding their teeth in frustration develop these features. As Bones enters it's final season, experts discuss how accurately crime dramas reflect forensic anthropology.

Teachers will discover forensic anthropology and techniques for engaging students in current topics in anthropology.

Aryn Klein, Graduate Degree, Anthropology, Phoenix College
