

Set a Course for Home: The Science of Star Trek Voyager

5/25/2017 6:00:00 PM

1 Hour          Science          North 132BC

As the crew of the Intrepid-class ship Voyager journeyed home, they enjoyed technologies such as neural computers and a holographic AI doctor. We discuss the science behind the ship and it's encounters on the way home.

Teachers will discover resources for teaching science speculation in Star Trek, current topics in technology demonstrated in Star Trek and discussion points for student engagement in popular culture.

Romeo Farinacci, PhD, CISSP/CISM/GSLC, Grand Canyon University

Jonathon Hill, Research Specialist, Mars Space Flight Facility, Graduate Student, Geological Sciences, Liberal Arts & Sciences, Arizona State University

Tanya Harrison, Director of Research for the Space Technology and Science ("NewSpace") Initiative at Arizona State University

Sierra Ferguson, Graduate Student, Geological Sciences, Liberal Arts & Sciences, Arizona State University
