

Shooting Star- Wars: How meteorites are found, recovered, and classified

5/25/2017 10:30:00 AM

1 Hour          Science          North 132BC

On June 2nd in 2016, a meteoroid the size of a car hurtled through the atmosphere and landed somewhere in Arizona. In this panel, experts will discuss how they tracked it down.

Teachers will have an opportunity to examine meteorites and discover in-classroom resources to teach about meteorites in the classroom

Daniel Dunlap, Grad Research Assistant School Of Earth and Space Exploration, Arizona State University

Laurence Garvie, Research Professor, Center for Meteorite Studies, Arizona State University

Emilie Dunham, Grad Research Assistant School Of Earth and Space Exploration, Arizona State University

John Christoph, Grad Research Assistant School Of Earth and Space Exploration, Arizona State University
