

Don't Squeeze the Martian: The Science of the film "Life"

5/27/2017 9:00:00 PM

1 Hour

Science

North 131C

"Life" features a team of astronauts on the International Space Station studying a new organism. They let it out. Find out what real-life scientists think about the strange life form and how they would have maintained the firewalls.

Teachers will find out the science behind "Life" and find out the opinions of scientists on the movie. Their opinions can serve as guideline for all blockbuster movies to help when planning on using popculture for a lesson.

Brian Johnson, Graduate Student, Virology, Arizona State University

Teresa Esman, Graduate Student, Planetary Science, Mars, Lunar and Planetary Laboratory, University of Arizona

Jim Crowell, Graduate Student, Extreme Environment Technology, Space colonization, Arizona State University

Jonathon Hill, Graduate Degree, Spacecraft Operations, Martian Geology, Spaceflight, Arizona State University
