

Filth, Disease, and Stink: Science and Medicine in the Victorian Era

5/27/2017 10:30:00 AM

1 Hour          Science                  North 132A

Leeches. Mercury. Homeopathy. All these were tools used by doctors in the Victorian Era. Experts discuss why physicians at the time thought they worked, and whether there is any value in these treatments today.

Teachers will discover the history of healthcare, public health and sanitation with resources to add to STEM classroom projects and discussion.

Khyatiben Pathak, Graduate Degree, Microbiology, Biochemistry, Mass Spectrometry, TGen

Joseph Hunter, Graduate Student, Vaccinology, Genetic Modification, Immunology, Arizona State University

Erica O'Neil, Graduate Student, Health and Medicine, Anthropology, School of Life Sciences, Arizona State University

Andy Damos, Graduate Student, Genetic Engineering, Arizona State University
