Frankenstein was first published in 1818. Since then it has had a huge impact on science fiction and discussions of science ethics. In this panel scientists will discuss how the lessons of Frankenstein relate to their work, and how often they get to scream "IT'S ALIVE"!

Teachers will discover how Frankenstein is still impacting science and its ethics despite it being 200 years old and come out with a fresh perspective on the value that literature can have in STEM.

Melissa Wilson Sayres, Graduate Degree, Genetics/ Biology, Programming Arizona State University

Ariel Anbar, Graduate Degree, Geochemistry, Astrobiology, Arizona State University

Ernesto Abeytia, Graduate Degree, Creative Writing, Poetry, Arizona State
