Goku and One Punch Man trained to reach the peak of their physical fitness and power levels. Is the body really capable of handling that much power? Can One Punch Man hit so hard that his own bones would shatter under the force? Our scientists ponder these questions and dare to answer them.

Teachers will better understand the limits of the human body and if it is possible to reach a superstrength. With the knowledge teachers will be able to better spot when students are at their limits and accommodate if they wish to.
