Science

North 131C

Occasionally a story will go viral about a silly-sounding experiment, such as when scientists put ants on tiny stilts. Despite how strange this may sound, there was important science behind this experiment and it answered an important question about the ant brain. Learn more about this and other weird studies and what they've taught us.

Teachers will discover the truth behind some weird scientific discoveries and how important they are.

Brandon Favre, University student studying Molecular Biosciences and Biotechnology, Biodesign Institute, Arizona State University

Angel Garcia,

K. Jacob Patten, Graduate Degree, Cognitive/Perceptual Psychology, Arizona State University
